

Gradle - Installation & Setup

Gradle: concept, Quality Engineering use cases, first steps and official reference.

Goal of this manual

This manual guides you through the complete installation and configuration process, from preparing the environment to final validation. Follow the steps in order and use each verification checkpoint to confirm that the setup was completed correctly.

Before you start

Confirm the supported operating system, runtime/dependencies and version requirements in the current official documentation before installing. The technical checklist below mirrors the validated tool-specific procedure.

Where to run commands

On Windows use PowerShell or Command Prompt; on macOS/Linux use Terminal. After changing PATH or environment variables, close and reopen the terminal before validating again.

Step-by-step installation and setup

1. Follow this tool-specific step: Se o projeto contém gradlew/gradlew.bat, não instale Gradle global sem necessidade.
2. Follow this tool-specific step: Valide o wrapper: Windows gradlew.bat --version; macOS/Linux ./gradlew --version.
3. Follow this tool-specific step: Para instalação global, siga gradle.org/install, extraia a distribuição e adicione bin ao Path.
4. Follow this tool-specific step: Valide gradle -v.
5. Follow this tool-specific step: Em projeto de exemplo, execute gradlew.bat test ou ./gradlew test.

Commands and validation

```
gradle -v
```

```
gradlew.bat --version
```

```
gradlew.bat test
```

First working use

Complete the first working use described in the steps above and confirm the expected tool-specific result before adding integrations or advanced configuration.

Common problems and fixes

gradle não reconhecido: use o Wrapper se existir ou revise Path.

Java incompatível: alinhe JDK com a versão do Gradle.

Wrapper não executa: confira permissões no Linux/macOS e arquivos gradle/wrapper.

Completion criteria

Treat setup as complete when the version/execution checks work and the first use in this manual finishes without errors. Only then move to integrations or advanced configuration.
