

Grafana - Installation & Setup

Dashboards and exploration of observability data from multiple data sources.

Goal of this manual

This manual guides you through the complete installation and configuration process, from preparing the environment to final validation. Follow the steps in order and use each verification checkpoint to confirm that the setup was completed correctly.

Before you start

Confirm the supported operating system, runtime/dependencies and version requirements in the current official documentation before installing. The technical checklist below mirrors the validated tool-specific procedure.

Where to run commands

On Windows use PowerShell or Command Prompt; on macOS/Linux use Terminal. After changing PATH or environment variables, close and reopen the terminal before validating again.

Step-by-step installation and setup

1. Follow this tool-specific step: Acesse grafana.com/docs/grafana/latest/setup-grafana/installation e escolha o método.
2. Follow this tool-specific step: Instale/inicie o serviço ou container.
3. Follow this tool-specific step: Abra a URL local documentada (normalmente porta 3000 em instalação padrão).
4. Follow this tool-specific step: Faça o login inicial conforme a documentação e altere credenciais quando solicitado.
5. Follow this tool-specific step: Adicione uma data source de laboratório, por exemplo Prometheus local.
6. Follow this tool-specific step: Crie um painel simples e valide a consulta.

First working use

Complete the first working use described in the steps above and confirm the expected tool-specific result before adding integrations or advanced configuration.

Common problems and fixes

UI não abre: valide serviço/container e porta.

Data source falha: valide URL/rede/credenciais separadamente.

Grafana Cloud não exige instalar o servidor local; diferencie os dois cenários.

Completion criteria

Treat setup as complete when the version/execution checks work and the first use in this manual finishes without errors. Only then move to integrations or advanced configuration.
