Complete the first working use described in the steps above and confirm the expected tool-specific result before adding integrations or advanced configuration.

Common problems and fixes

JMeter não abre: valide Java primeiro.

jmeter não reconhecido: execute pelo bin ou adicione-o ao Path se desejar uso global.

Teste de carga pela GUI: evite; use GUI para criação/debug e CLI para carga.

Completion criteria

Treat setup as complete when the version/execution checks work and the first use in this manual finishes without errors. Only then move to integrations or advanced configuration.
