

k6 - Installation & Setup

Code-driven performance and load testing with metrics and thresholds.

Goal of this manual

This manual guides you through the complete installation and configuration process, from preparing the environment to final validation. Follow the steps in order and use each verification checkpoint to confirm that the setup was completed correctly.

Before you start

Confirm the supported operating system, runtime/dependencies and version requirements in the current official documentation before installing. The technical checklist below mirrors the validated tool-specific procedure.

Where to run commands

On Windows use PowerShell or Command Prompt; on macOS/Linux use Terminal. After changing PATH or environment variables, close and reopen the terminal before validating again.

Step-by-step installation and setup

1. Follow this tool-specific step: Instale k6 pelo método oficial da Grafana para Windows/macOS/Linux.
2. Follow this tool-specific step: Abra novo terminal e execute k6 version.
3. Follow this tool-specific step: Crie script.js importando http de k6/http e um default function com `http.get("https://test.k6.io")`.
4. Follow this tool-specific step: Execute `k6 run script.js`.
5. Follow this tool-specific step: Observe checks/métricas e confirme que a execução termina sem erro de conexão.

Commands and validation

```
k6 version
```

```
k6 run script.js
```

First working use

Complete the first working use described in the steps above and confirm the expected tool-specific result before adding integrations or advanced configuration.

Common problems and fixes

k6 não reconhecido: revise o método de instalação/PATH.

Erro TLS/proxy: investigue rede/certificados; não confunda com falha do k6.

Não use `npm install k6` esperando instalar o CLI oficial.

Completion criteria

Treat setup as complete when the version/execution checks work and the first use in this manual finishes without errors. Only then move to integrations or advanced configuration.
