

WireMock - Installation & Setup

HTTP mocking and service virtualization for controlled dependencies during testing.

Goal of this manual

This manual guides you through the complete installation and configuration process, from preparing the environment to final validation. Follow the steps in order and use each verification checkpoint to confirm that the setup was completed correctly.

Before you start

Confirm the supported operating system, runtime/dependencies and version requirements in the current official documentation before installing. The technical checklist below mirrors the validated tool-specific procedure.

Where to run commands

On Windows use PowerShell or Command Prompt; on macOS/Linux use Terminal. After changing PATH or environment variables, close and reopen the terminal before validating again.

Step-by-step installation and setup

1. Follow this tool-specific step: Escolha um método oficial: JAR standalone ou Docker.
2. Follow this tool-specific step: JAR: baixe wiremock-standalone da documentação oficial e valide java -version.
3. Follow this tool-specific step: Inicie o JAR na porta padrão/documentada.
4. Follow this tool-specific step: Docker: use a imagem oficial e publique a porta necessária.
5. Follow this tool-specific step: Crie um stub simples para GET /hello retornando 200 e JSON/texto.
6. Follow this tool-specific step: Faça curl para o endpoint e confirme a resposta simulada.

Commands and validation

```
java -version
```

```
curl http://localhost:8080/hello
```

First working use

Complete the first working use described in the steps above and confirm the expected tool-specific result before adding integrations or advanced configuration.

Common problems and fixes

Porta ocupada: altere porta ou encerre processo conflitante.

Stub não casa: revise método, URL e arquivos mappings.

Docker não inicia: valide Docker Engine antes de investigar WireMock.

Completion criteria

Treat setup as complete when the version/execution checks work and the first use in this manual finishes without errors. Only then move to integrations or advanced configuration.
