Before you start

Confirm the supported operating system, runtime/dependencies and version requirements in the current official documentation before installing. The technical checklist below mirrors the validated tool-specific procedure.

First working use

Complete the first working use described in the steps above and confirm the expected tool-specific result before adding integrations or advanced configuration.

Common problems and fixes

Nenhum tráfego: revise proxy/browser/porta.

HTTPS com erro: configure o certificado de teste corretamente; não desative validação global.

Active Scan pode alterar/atacar o alvo: nunca use sem autorização.

Completion criteria

Treat setup as complete when the version/execution checks work and the first use in this manual finishes without errors. Only then move to integrations or advanced configuration.
