Getting started

Start from the official website, check prerequisites and follow the Fiddler installation/configuration guide.

Practical workflow

Define the analysis goal, reproduce the scenario, collect evidence with Fiddler, compare expected behavior and document conclusions.

Troubleshooting

Check permissions, dependencies, certificates, drivers, connectivity and versions when expected data is not captured or displayed.

How to start safely

Start from the official Fiddler site and documentation. Confirm prerequisites, supported versions, operating system and required permissions. Learn in a controlled environment before using it in a critical workflow.

First QA-oriented use

Pick one small, verifiable task in Fiddler, configure only what is necessary, run a simple example and confirm the outcome. Repeat with different data or conditions before adding abstractions.

Common issues and troubleshooting

When Fiddler fails, verify versions, dependencies, permissions, connectivity, data and environment before assuming a product defect. Preserve the original error and reduce the issue to the smallest reproducible case.
