

QA LAB BRASIL

Reference guide - QA Lab Brasil

API Lab

Practice focused on requests, responses, contracts, errors and API investigation.

Build a request

Choose method, endpoint, headers, authentication and body, then compare the request with the expected contract.

Interpret the response

Analyze HTTP status, headers, body, schema, response time and effects produced in other systems.

Negative scenarios

Explore missing fields, invalid formats, authorization, duplication, rate limits, timeouts and unavailable dependencies.

QA Tip: 200 OK does not guarantee that business rules or data are correct.
