

QA LAB BRASIL

Reference guide - QA Lab Brasil

Cypress

Web automation framework/ecosystem focused mainly on modern applications and JavaScript/TypeScript workflows.

QA use

Supports UI and E2E tests with execution, debugging and ecosystem-specific tooling.

Installation

Usually installed in Node.js projects through npm. Validate Node.js and npm first.

Tool selection

There is no universally best tool. Compare browser requirements, stack, integration, maintenance and team experience.

QA Tip: Use the tool as part of a quality strategy; understanding the objective matters more than memorizing the interface.
