

API Tools

Postman, Bruno, Insomnia, SoapUI, Swagger/OpenAPI, REST Assured and when each category fits.

API clients

Postman, Bruno and Insomnia help create requests and organize environments, authentication and collections. Compare features, collaboration and versioning model before choosing.

SOAP and contracts

SoapUI is well known for SOAP service testing and also supports REST. Swagger/OpenAPI describes HTTP API contracts and helps documentation, exploration and client/test generation.

Automation and performance

REST Assured is a Java library for API tests. JMeter can execute HTTP requests but is especially useful for load and performance scenarios; it should not be treated as equivalent to an API client.

When to use it

Use this knowledge when product risk, architecture or the delivery stage requires this type of validation. Confirm the goal, environment, required data and expected evidence before starting.

How QA applies it

Start from the behavior or risk to validate, prepare data and environment, execute the technique or tool reproducibly and capture evidence that helps the team understand the result.

Good practices

Prioritize high-impact scenarios, keep data and environments controlled, record important decisions and review the approach periodically to avoid redundant or outdated coverage.

QA tip

Different tools may work with APIs without serving the same purpose.
