

QA Interview Center

Technical preparation by level with questions, scenarios and expected reasoning.

Trainee / Junior

Concepts such as bugs, test cases, regression, Smoke, APIs, HTTP status, severity and priority form the base.

Mid / Senior

Regression strategy, automation, API, SQL, CI/CD, investigation and risk-based decisions gain depth.

Lead

Quality strategy, metrics, architecture, prioritization, risk communication, leadership and process evolution are discussed in context.

When to use it

Use this knowledge when product risk, architecture or the delivery stage requires this type of validation. Confirm the goal, environment, required data and expected evidence before starting.

How QA applies it

Start from the behavior or risk to validate, prepare data and environment, execute the technique or tool reproducibly and capture evidence that helps the team understand the result.

Good practices

Prioritize high-impact scenarios, keep data and environments controlled, record important decisions and review the approach periodically to avoid redundant or outdated coverage.

QA tip

In interviews, explain your reasoning and context; memorized definitions are rarely enough.
