

QA Playground

Practice environment with requirements, bug, API, SQL and automation challenges.

Test Design Challenge

Read a rule or User Story, choose data and scenarios, then compare your strategy with an explained solution.

Bug & Investigation Challenge

Analyze symptoms, evidence, logs and requests to decide what to reproduce, report and investigate.

Automation & SQL Challenge

Complete small Playwright, locator, assertion and SQL exercises focused on QA validation.

When to use it

Use this knowledge when product risk, architecture or the delivery stage requires this type of validation. Confirm the goal, environment, required data and expected evidence before starting.

How QA applies it

Start from the behavior or risk to validate, prepare data and environment, execute the technique or tool reproducibly and capture evidence that helps the team understand the result.

Good practices

Prioritize high-impact scenarios, keep data and environments controlled, record important decisions and review the approach periodically to avoid redundant or outdated coverage.

QA tip

Deliberate practice turns concepts into applicable skill.
