

QA Shop Project

Complete fictional project for practicing the quality lifecycle end to end.

From requirement to test

Epics, User Stories and Acceptance Criteria feed analysis, scenarios, cases, data and traceability.

From execution to defect

Learners execute login, search, cart, checkout and payment flows, find bugs and practice evidence, triage and Retest.

From regression to automation

Critical scenarios evolve into Playwright/API, Git and CI/CD, connecting theory, manual execution and quality engineering.

When to use it

Use this knowledge when product risk, architecture or the delivery stage requires this type of validation. Confirm the goal, environment, required data and expected evidence before starting.

How QA applies it

Start from the behavior or risk to validate, prepare data and environment, execute the technique or tool reproducibly and capture evidence that helps the team understand the result.

Good practices

Prioritize high-impact scenarios, keep data and environments controlled, record important decisions and review the approach periodically to avoid redundant or outdated coverage.

QA tip

The project is fictional to enable safe practice without exposing third-party data or systems.
