

QA Setup Center

Installation and configuration guides for a QA workstation.

Choose your track

Playwright + Python, Selenium + Java, API Testing and Mobile have different prerequisites; each track shows a recommended order.

Download and installation

Each tool links to its official site and explains installation, PATH, version validation and common issues.

Environment Doctor

Checklist to verify Python, Java, Node.js, Git, VS Code, Playwright, browsers and other dependencies before running tests.

When to use it

Use this knowledge when product risk, architecture or the delivery stage requires this type of validation. Confirm the goal, environment, required data and expected evidence before starting.

How QA applies it

Start from the behavior or risk to validate, prepare data and environment, execute the technique or tool reproducibly and capture evidence that helps the team understand the result.

Good practices

Prioritize high-impact scenarios, keep data and environments controlled, record important decisions and review the approach periodically to avoid redundant or outdated coverage.

QA tip

Always validate an installation with a version command before moving on.
