

QA Lab Shorts

Animated technical micro-lessons explaining flows in approximately 35–50 seconds.

Visual concepts

API, CI/CD, Git, Scrum, authentication, Docker and architecture are strong candidates because motion helps explain flow.

Original identity

Animations use diagrams, icons, code and fictional screens, without real people or third-party material without permission.

Content companion

Each Short links to the full explanation, exercise and corresponding PDF; video does not replace documentation.

When to use it

Use this knowledge when product risk, architecture or the delivery stage requires this type of validation. Confirm the goal, environment, required data and expected evidence before starting.

How QA applies it

Start from the behavior or risk to validate, prepare data and environment, execute the technique or tool reproducibly and capture evidence that helps the team understand the result.

Good practices

Prioritize high-impact scenarios, keep data and environments controlled, record important decisions and review the approach periodically to avoid redundant or outdated coverage.

QA tip

A short video should simplify the flow without oversimplifying the concept.
