

QA Templates

Practical templates for test cases, bugs, plans, reports, UAT, Smoke, regression and releases.

Test case

Title, preconditions, data, steps and expected result. Detail should enable consistent execution without making the case impossible to maintain.

Bug Report

Objective title, environment, precondition, steps, expected result, actual result, evidence, severity/impact and relevant data.

Test Plan and Strategy

Scope, risks, approach, environments, data, test types, responsibilities, entry/exit criteria, metrics and communication.

Reports

Smoke, regression, UAT and release reports should highlight execution, results, blockers, defects, risks and factual readiness information.

When to use it

Use this knowledge when product risk, architecture or the delivery stage requires this type of validation. Confirm the goal, environment, required data and expected evidence before starting.

How QA applies it

Start from the behavior or risk to validate, prepare data and environment, execute the technique or tool reproducibly and capture evidence that helps the team understand the result.

QA tip

A template is a starting point; adapt it to risk, product and process instead of filling fields without purpose.
