

Exploratory Testing

An approach where learning, test design and execution happen together and are guided by risk.

Charters

A charter defines a mission, area, risk or question without turning exploration into a rigid script.

Heuristics

Heuristics help vary data, states, sequences, users, platforms, interruptions and error conditions.

Evidence

Record notes, paths, data, questions, defects and discoveries for debriefing and learning.

Sessions

Time-boxed sessions balance focus and freedom, especially in Session-Based Test Management.

When to use it

Use this knowledge when product risk, architecture or the delivery stage requires this type of validation. Confirm the goal, environment, required data and expected evidence before starting.

How QA applies it

Start from the behavior or risk to validate, prepare data and environment, execute the technique or tool reproducibly and capture evidence that helps the team understand the result.

QA tip

Exploratory does not mean testing without method; it means adapting the method as we learn.
