

QA Lab Brasil

GitHub Actions

CI/CD automation integrated with GitHub.

Workflows

YAML workflows in `.github/workflows` react to push, pull_request or manual triggers.

QA in pipelines

Automation can run linting, unit/API/Web tests, generate reports and block merge/deploy when gates fail.

Security

Use GitHub Secrets/variables for sensitive data and restrict workflow token permissions.

When to use it

Use this knowledge when product risk, architecture or the delivery stage requires this type of validation. Confirm the goal, environment, required data and expected evidence before starting.

How QA applies it

Start from the behavior or risk to validate, prepare data and environment, execute the technique or tool reproducibly and capture evidence that helps the team understand the result.

Good practices

Prioritize high-impact scenarios, keep data and environments controlled, record important decisions and review the approach periodically to avoid redundant or outdated coverage.

QA tip

Always connect the practice to product risk and the evidence needed for quality decisions.
