

QA & Engineering Glossary

Quick reference for acronyms and technical terms used across the quality ecosystem.

Essential acronyms

API, UAT, CI/CD, RCA, SLA, SLO, SLI, MFA, JWT, RAG and other acronyms are explained on first use and indexed for search.

Testing terms

Assertion, fixture, flaky test, mock, stub, regression, retest, traceability, coverage and testability have definitions and related content.

Engineering terms

Deploy, rollback, cache, queue, microservice, container, observability and idempotency connect QA to architecture and operations.

When to use it

Use this knowledge when product risk, architecture or the delivery stage requires this type of validation. Confirm the goal, environment, required data and expected evidence before starting.

How QA applies it

Start from the behavior or risk to validate, prepare data and environment, execute the technique or tool reproducibly and capture evidence that helps the team understand the result.

Good practices

Prioritize high-impact scenarios, keep data and environments controlled, record important decisions and review the approach periodically to avoid redundant or outdated coverage.

QA tip

Use the glossary as an entry point; related content provides depth.
