

Learning Paths

Organized routes for beginners, automation transitions and deeper Quality Engineering study.

How to use learning paths

Choose a path based on your professional goal. Each path recommends foundations, practice and tools in a coherent sequence.

QA Beginner

QA fundamentals → Testing types → Test design → Web testing → Bug reporting → Jira/Xray → API basics → SQL basics.

Modern Web Automation

JavaScript/TypeScript → Node.js/npm → Git → Playwright → API Testing → CI/CD → reporting and best practices.

Java Automation

Java → Maven/Gradle → JUnit/TestNG → Selenium → REST Assured → Cucumber → Spring Boot → CI/CD.

Mobile QA

Mobile fundamentals → ADB/Logcat → Appium → BrowserStack → Maestro/Detox → Device Cloud → troubleshooting.

Quality Engineer

Test strategy → API → automation → data → performance → security → observability → DevOps/CI-CD → metrics and quality leadership.

QA tip

A path is guidance, not a rigid rule; adapt it to your experience and work context.
